

# Newsletter archive

**nuevoMailer** api  
v.3.70+

- Display a dynamic newsletter archive in your website.
- By default it works only for requests coming from the same domain or sub-domain. For cross-domain requests open the files loadMenu.php and loadNewsletter.php and enable the line that defines the external domain. You will see comments at the top of each file.
- It takes 3 lines of code to implement it.

## SET-UP

1. Create a folder "api" next to admin folder.
2. Place files loadMenu.php and loadNewsletter.php in the api folder.
3. In the <head> part of the page where you want to show the archive add the following <script> block (see example in newsletters.html):

```
<script language="JavaScript" type="text/javascript">var url="http://www.yourdomain.com/mailer/";  
document.write('<script type="text/javascript" src="'+url+'admin/scripts/newsletter.js"></script>');  
</script>
```

Replace the **yellow part** with your own actual URL to your nuevoMailer installation.

**The following line loads a drop-down menu for selecting a newsletter:**

```
<div id="menuDiv" style="margin-top:30px"></div>
```

**And this line loads the newsletter you select with the menu.**

```
<div id="holderDiv"></div>
```

The page newsletters.html serves as example. You can use any other page.

**Note:** Only newsletters that are marked as **public** appear in the archive.
